

Final Project Proposal

For my final project I plan to demonstrate all that I have learned throughout the course. I will be using data from NYC OpenData. Utilizing the available data, I have decided to use 311 Service Requests for 2015. With the available data I plan to show:

- What was the number #1 service request handled by 311 in 2015?
- What season received the most service requests? Name a few of the SR's
- What borough made the most service request in 2015?
- How many service requests remain open? How many have been closed?

I plan to have a pie graph to display the seasons and possibly the borough with most service requests. I also plan to include some images (if I can figure it out) and some other types of graphs to display more info on service requests for 2015.
